OUR MISSION STATEMENT

*To serve and significantly add value to clients' businesses through every consultation or product we supply.
To offer the very best technical advice available through dedication to continuous improvement.*

McHort warehouse

McHort Sales Van

McHort is a New Zealand owned and operated business specializing in consultancy, technical training and product supply to growers of ornamentals in containers. The business was established in 2001 by Donald and Hilary McPherson, now managed and operated by Chris & Kate Tubby

McHort specialises in
container crop nutrition & biological pest & disease control.
We offer a nationwide service and visit most North Island provinces on a regular rotational basis.

www.mchort.co.nz

McHort Messenger

is a free monthly newsletter bringing topical news, views, advice and special deals to growers of ornamental crops in containers everywhere.

If you would like a copy, please contact us.

FERTILISER for Topdress and field use

APEX Gal-Xe 'Enrich' Topdress Premium triple blends. Soluble, slow & controlled release. The 'Gold standard' in top dress formulations. Proven performers for many years.

'Enrich Super Iron' 21+2.8+4.9+Te 4-5 month **APE09**
 'Enrich Full Season' 22+2.6+8.3+Te 6-7 month **APE08**
 'Empower Cool Weather' 21+3+4.9+Te 3-4 month **APE26**

APEX Gal-Xe 'Enhance' for Flower crops in ground

Soluble, slow & controlled release blend for cut flowers, flower beds, stock bed, plantings, etc. Surface apply and lightly rake in, or place in the planting hole. Feeds for up to 4 months.

'Enhance' 14+6+11.6+Te 3-4 month **APE11**

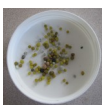

McFERT SPECIALITY FERTILISERS FOR VALUE AND PERFORMANCE

McFERT TOP 24 24+3+6.6+Te 10-12 weeks **APE33**

Soluble and slow release. Top dress for fast initial release for a quick green-up. Especially formulated for NZ conditions. Sticks to the pot top, reducing 'roll-off'. High analysis with extra Iron. 50% of 'N' is slow release.

McFERT FIELD GROW/LAWN 21+5+10+Te 6 month **APE10**

Soluble & slow release. Planting & established planting fertiliser for landscape plantings and lawns. Feeds for the growing season. Use in the planting pit, place a layer of soil between the fertiliser & roots, or surface apply. A versatile product for the professional landscaper. High analysis means low rates of use. Great value!

McFERT TAB 10g 20+4+8+Te Carton 1000 Tablets **APE37**

Slow release. Pre-measured dose for tree & shrub planting. Soil microbes activate release for post planting establishment.

APEX Nursery Fertilisers MSDS available at www.mchort.co.nz

WITH
GAL-Xe ONE
TECHNOLOGY

McHort has proven expertise in potting mix formulation and can provide you and your supplier with a custom made recipe. We offer an extensive standard range and will custom blend to achieve an NPK formulation to exactly meet your needs. Please call Chris on 021 782 250 for a free consultation.

BIOLOGICAL PEST & DISEASE CONTROL

PLANT SOAP PS1 liquid concentrate

At last an effective, safe and affordable alternative to toxic chemical insecticides. Plant Soap simply suffocates insects it contacts. The high viscous spray is colourless, odourless and non toxic. Effective against a very wide range of insects including aphid, whitefly, scale, mealy bug and two spotted mites, all as eggs, juveniles and adults. It kills by suffocating! Good coverage as a high volume, high pressure spray is essential. Plant Soap is not rain-fast; allow for 12 hours free from rain or irrigation post spray. Most natural insect predator adults are unaffected by Plant Soap, making it ideal to use in integrated Biological pest & disease control programmes.

TRICHOPROTECTION® Biological disease suppression

NZ made biological formulations containing high concentrations of the beneficial organism *Trichoderma sp.* Careful selection of the correct strain & placement in the right place at the right time can provide suppression of a range of root zone pathogens & leaf diseases. McHort has unrivalled practical experience in the use of these Trichoprotection® products developed especially for ornamental crops. Before you invest in any *Trichoderma* product give us a call. With 20 years experience our custom made programmes that work! Call Donald on 021 782250

PLANT SOAP + TRICHOSPRAY COMBO

Using Plant Soap & TrichoSpray Nursery in a tank mix provides an effective combined leaf disease & pest management solution. The *Trichoderma* in TrichoSpray feeds on the organic base of Plant Soap fuelling its colonisation of the entire sprayed plant surface. The result is simultaneous and very effective pest & leaf disease control. Both products are non toxic, odourless and have no withholding period. The surfactant properties of Plant Soap reduce water droplets on foliage dissuading fungal growth.

Makes up 200Lt.

McHort Mobile: 021 782 250

BIOLOGICAL PEST & DISEASE CONTROL

NITROSOL ORGANIC + TRICHOFLOW COMBO

Using Nitrosol Organic & TrichoFlow Nursery in a tank mix drench applied to your seedling or cutting trays provides effective **root & collar rot suppression**. The Nitrosol acts as a bio-stimulant facilitating enhanced *Trichoderma* colonisation and superior root development, health and vigour. Utilise tank mix soon after mixing. Drench before sowing or setting cuttings. & at 10-14 day intervals there after. Call for compatibility information.

5Lt + 500g combo pack

HYPOMITES : The most successful pest predators for nursery use, Hypomites predate a wide range of plant pests in the root zone very successfully within modern nursery cultural practice. They are easy to apply, work tirelessly to eradicate pests and even sustain themselves on mould mites in your media, so that they remain fighting fit to deal to subsequent pest re-infestation. One application in each stage of production is usually enough. Early application, in propagation, gives the best and most economical results.

Pests controlled include Sciarid fly & root mealy bug.

TRI11

HYPOMITES are supplied in a canister containing a bran of peat & vermiculite. Each contains 10,000 mites at all stages of development—eggs to adults. Simply flip the lid and shake them out onto the surface of the growing media containing your plants. One canister will treat about 90 prop. trays or equivalent area. Simple and effective!

(Special delivery conditions apply please call for details)

Adult Sciarid fly

Sciarid fly maggot

YELLOW STICKY TRAPS.

For monitoring insect populations amongst your crops.

For detailed information on their correct use contact Donald on 021 782250
