

WHAT MAKES McHORT TOP DRESS FERTILISERS SPECIAL?

Phased release, of soluble and slow release components, for a quick response, even at low temperatures, that lasts. The highest 'N' content in the market for growth response and economy. The highest Iron content, ten times more than some brands, for a quick 'Green-up' that lasts.

A low salinity rating for maximum safety. Suitability for the widest range of plant species, including 'P' sensitive species, such as South African and Australian natives.

McFert Top 24: 24-3-6.6+Te is a 10-12 week hybrid top dress formula for extension or supplementary feeding of woody container nursery stock. It is a dual blend of soluble and slow release components which delivers fast nutrient supply irrespective of temperature, whilst simultaneously delivering extended nutrient supply through microbial degradation of a long chain molecule nitrogen source. A comprehensive trace element package includes elevated Iron 'Fe' .

The high 'N' analysis of this product means that very modest application rates delivers a powerful growth response with excellent foliage colour recovery. The granular format, after an initial watering, sticks to the top of the pot eliminating 'roll-off'.

APEX 'Empower' and 'Enrich' top dress formulations are available in a range of options which feed for 3-7 months. Each is a triple blend of soluble, slow release and encapsulated controlled release components. They are suitable for both supplementary and extension feeding of woody container nursery stock. The phased release ensures low temperature plant response with minimum risk of burning. Every longevity in the range features high 'N' and elevated 'Fe', at class leading quantities, for performance and economy.

All McHort supplied top dress fertilisers have been selected for optimum performance and economy under New Zealand climatic and cultural practices. We have over twenty years of experience of these products here in NZ so you can be confident they work and work well. Do the maths and you'll be pleasantly surprised about how inexpensive top quality, reliable, top dress fertiliser is from the McHort range.

See overleaf for details of the comprehensive McHort range of top dress fertilisers.

MSDS available on request.

McHort TOPDRESS FERTILISER RANGE

BEST RANGE, BEST PERFORMANCE, BEST VALUE BY FAR

SPRING & MORE

McFert Top 24 24+3+6.6+Te 8-10wk

A fast acting, less temperature sensitive formulation containing Methyl urea and soluble Nitrogen in equal parts. Once watered in, the product sticks to the growing media surface and resists loss if the pot blows over. Elevated Iron content for green-up and superior technology, The Wolf Trax trace element package ensures uniform distribution of the trace elements right to the bottom of the bag.

SUMMER

Apex 'Enrich' Super Iron Topdress 21+2.1+4.9+Te 4-5 month

A triple blend of soluble, slow release & encapsulated controlled release fertiliser. For sustained plant growth and leaf colour that lasts for up to 18 weeks, even in the heat of Summer, from a single application. Contains a full range of trace elements and elevated Iron for deep green foliage colour. Used with great success for over 20 years here in New Zealand. Fantastic value for money!

SPRING & EARLY SUMMER

Apex 'Empower' Cool Weather Topdress 21+3+4+Te 3-4 month

A triple blend of soluble, slow release & encapsulated controlled release fertiliser. For sustained plant growth and leaf colour that lasts for up to 12 weeks, even in the heat of Summer, from a single application. Contains a full range of trace elements and elevated Iron for deep green foliage colour. Use when extended feeding is not a priority and plant sales are expected within 3 months. A very economical choice.

Apex 'Enrich' Full Season Topdress 22+2.6+8.3+Te 6-7month

A blend of release technologies for a staged release of nutrients. Delivers a quick response with sustained performance. One application in Spring will feed for the whole growing season. Suitable for the widest range of plant species.

Formulated with elevated Iron for greening-up foliage.

Especially suited for feeding advanced grade plant stock.
