

Greetings all.

Yes, NOW is the time to apply top dress fertiliser either to restore vigour and colour, or to boost plant volume and height. Either way it will help you present your stock at its best!

You might consider planning ahead in anticipation of root rot disease later in the year. Getting it right at time of potting can save you a heap of worry and stress later. Choose your potting mix, fertiliser and pot type wisely to avoid crop losses. Let's face it, you'll need every saleable plant you can raise in light of the unprecedented demand and looming stock shortages ahead!

Maybe you have some lawns on the nursery or at home that could be looking better. Our McFert Lawn fertiliser will give a long lasting green-up, suppress mosses, but not see you tied to the mower all year. Give it a go; it works for us!

If you haven't yet tried our biological alternative pest and disease suppression products, now is good! We've been supplying alternatives to chemical pesticides and fungicides for decades with excellent results and many satisfied repeat customers. Call us for a chat today.

Cheers and good growing.

We have SAUCERS

8 sizes
18 - 50cm

From 75c each

FOR TUBS AND POTS

PLANT SOAP SPRAY IT, NOW!

FOR PEST SUPPRESSION –

Simply suffocates a wide range of biting & sucking insects right there on your plants. Aphid, Whitefly, mites, scale, Mealy bug and many more. Eggs, juveniles and adults. Non toxic, safe on pollinators and pest predators.

Better for us and the environment.

DE-WATERING EFFECT –

Plant Soap is a natural surfactant which, when sprayed on to the leaves & stems, prevents water from settling. This persistent effect denies wind blown or water borne fungal spores the conditions they need to germinate and attack your plants. It's all good; do try it !
