PRODUCT

Use **TRICHOSPRAY NURSERY**

APPLICATION RATE

5g/10Litre with Plant Soap PS1@ 30-40mls/ 10 litre

APPLICATION METHOD

Foliar spray

FREQUENCY

7-14 day intervals. Have a 14 day interval between the last fungicide application and the first TrichoSpray.

Use TrichoSpray in the last 6-8 weeks of production only when disease is under control as a preventative measure. Revert to chemical fungicides is disease pressure is high.

Carefully observe the mixing instructions on the pack to ensure maximum solubility.

Keep all **TRICHOPROTECTION** product in the fridge at 4°C.

Reseal in-use packets before storing.

Organic liquid feeds may be mixed with all **TRICHOPROTECTION** products.

Use all prepared solutions the same day.

Avoid spraying under bright conditions.

TRICHOPROTECTION Biological inoculant treatments are intended to assist you in preventing disease in your crop. They are NOT suitable for the eradication of existing established diseases. It may be necessary to intervene with chemical fungicides to achieve disease free crops. Check with us before adding any chemical fungicide to your mix or applying them to the foliage. Several fungicide are compatible with a **TRICHOPROTECTION** programme consult us for specific details.
